Re: Final import requirements for *Draecena suderiana* (lucky bamboo)

Dear Dr. Shu-Young Chang,

Thank you for your agreement on the fumigation requirements for lucky bamboo from Taiwan (letter dated 25 July, 2005).

Following our correspondence on this issue I would like to summarize the import requirements for this commodity:

1. The canes must be dry, without water, leaves, seeds, roots or other underground parts.
2. The canes are from an approved nursery officially inspected (whose name must appear on the PC and packaging).
3. The canes were officially inspected prior to export and found free from:

Aleurodicus disperses
Planococcus minor
Maconellocoocus hirsutus
Thrips palmi
Tetranychus viennensis
Tetranychus hydrangeae
Phytophthora cinnamomi
Erwinia chrysanthemi
Phyllosticta spp.
Ceratocystis paradoxa

4. Prior to shipment, the canes will be fumigated with methyl bromide at the rate of 48g/m² for 3 hours at a temperature no less than 10°C, as indicated on the PC under "treatment." (Fumigation company must be certified by BAPHIQ).

As is customary in Israel we will be issuing import permits to potential Israeli importers in accord with these requirements.

Please send us a list of the nurseries officially approved by BAPHIQ as well as the certified fumigation companies. This is required for the issuing of our import permit (which is nursery specific).

Yours sincerely

Director
